

The Genocidalists Speak For Themselves

Parson Thomas Malthus, employed by the British East India Company, wrote in his 1805 *An Essay on the Principle of Population*:

“All children who are born, beyond what would be required to keep up the population to a desired level, must necessarily perish, unless room be made for them by the death of grown persons.... Therefore ... we should facilitate, instead of foolishly and vainly endeavoring to impede the operations of nature in producing this mortality; and if we dread too frequent visitation of the horror of famine, we should sedulously encourage the other forms of destruction, which we compel nature to use.

“Instead of recommending cleanliness to the poor, we should encourage contrary habits. In our towns we should make the street narrower, crowd more people into the houses, and court the return of the plague. In the country, we should build our villages near stagnant pools, and particularly encourage the settlement in all marshy and unwholesome situations. But above all we should reprobate specific remedies for ravaging diseases; and restrain those benevolent, but much mistaken men, who have thought they are doing a service to mankind by protecting schemes for the total extirpation of particular disorders.”

Lord Bertrand Russell wrote in his *Prospects*

for Industrial Civilization:

“The white population of the world will soon cease to increase. The Asiatic races will be longer, and the negroes still longer, before their birth rate falls sufficiently to make their numbers stable without help of war and pestilence....”

He continues the same theme in his 1951 book, *Impact of Science on Society*:

“At present the population of the world is increasing at about 58,000 per diem. War, so far, has had no very great effect on this increase, which continued throughout each of the world wars.... War has hitherto been disappointing in this respect ... but perhaps bacteriological war may prove effective. If a Black Death could spread throughout the world once in every generation, survivors could procreate freely without making the world too full. The state of affairs might be unpleasant, but what of it?”

Prince Phillip, consort of Queen Elizabeth II, and co-founder of the World Wildlife Fund, was quoted by the Deutsche Presse Agentur, August 1988:

“In the event I am reborn, I would like to return as a deadly virus, in order to contribute something to solve overpopulation.”

Dr. Arne Schiotz, World Wildlife Fund Director of Conservation, 1984:

“Malthus has been vindicated, reality is finally catching up with Malthus. The Third World is overpopulated, it’s an economic mess, and there’s no way they could get out of it with this fast-growing population. Our philosophy is: back to the village.”
