### *China's Moon Project—Your Future*

The world economy must be reoriented to a newly defined concept of productivity, whose standard is currently set by the Chinese Moon program, in the view of U.S. economist Lyndon LaRouche. In a discussion with collaborators on Aug. 3, LaRouche stressed that all practices of cheap labor must be eliminated, to favor “productive labor of a high energy-flux density.” The standard for that is the Chinese Moon program, aimed at developing Moon-based helium-3 resources to feed a fusion energy-based economy. Once the U.S. begins to cooperate with China on this project, LaRouche stressed, “the China Moon project is the future of mankind.”

While the trans-Atlantic region has committed itself to an insane, anti-scientific, Earth-based, Lilliputian green policy, characterized by reduced energy-flux densities, the Chinese have defined the mission of their entire scientific program from the standpoint of space science. Since helium-3 is abundantly available on the Moon, but not on the Earth, and is much more powerful than other sources of fuel for fusion power found on our planet, the Chinese science program is actually at the frontier of the Solar System.

LaRouche's recently issued “Four New Laws To Save the U.S.A. Now” is grounded in the requirement for such a science-driver program, as elaborated by the great Ukrainian-Russian scientist Vladimir Vernadsky. “Our job,” LaRouche explained, “is to take the biggest driver we have, and that is the biggest and best source of thermonuclear fusion, and that is the driver on which the existence of the human species is going to depend for the time to come; and we're already in the middle of it. The only source of effective thermonuclear fusion in large mass is found on the Moon, and that's

where China is going, and going again, in order to build up the super-basis of power and energy on which the human species is henceforth going to depend. This is reality.”

“All we need is to unite a group of nations on Earth together, today, with China and others, who are cooperators on this thing, to make things happen that increase the energy-flux density of man's productive powers of labor.”

As *EIR* will be elaborating in future issues, the Chinese space program, currently focused on the Moon, represents the paradigm for what must be done to save the dying Western economies. Just look around Western Europe and the United States. Death rates are increasing; employment, where it is available, is largely meaningless in terms of productive output for society; “profit” is defined in terms of how much you can steal—as in the case of the vulture funds now going after Argentina.

The trans-Atlantic region is being dominated by a British monetarist ideology which kills. Nuclear plants are being shut down, the space programs cut back, and generations left without a purpose for living. Yet, right before our eyes, the Asian nations, such as Russia, India, and China, are striking out on a path of scientific progress which holds the only hope for resolving the real problems of drought, disease, poverty, and war.

Mankind, especially the United States, faces an existential choice. To continue in the current paradigm, promises further degeneration and most likely, a global war. To join hands with China and its partners in its space program, heralds a bright future for all.

It's thermonuclear fusion, or thermonuclear war. It's your choice.
