LYM Resolution vs. Global Warming Hoax

The following is the text of a resolution, written by members of the Los Angeles LaRouche Youth Movement and submitted to the Los Angeles County Democratic Party on March 26, 2007. The resolution will also be submitted to the California Democratic Convention along with bibliographic material and the text of the Emergency Recovery Act.

Resolution on the Fight Against Global Warming

WHEREAS, a significant number of scientists world-wide, with varying specialties in atmospheric science, oceanography, cosmoclimatology, paleoclimatology, geophysics, chemistry, radiology, glaciology, and vulcanology, have, independently and collectively, publicly denounced the Intergovernmental Panel on Climate Change's (IPCC) February

2007 conclusion, that “Most of the observed increase in globally averaged temperatures since the mid-20th Century is very likely due to the observed increase in anthropogenic greenhouse concentrations,” specifically as this relates to industrial CO₂ emissions, as recently as the March 2007 production of “The Great Global Warming Swindle” documentary on Britain’s Channel 4 television, among other publications, AND;

WHEREAS, long-term variation in climate change has been connected experimentally to geologic and astronomic cycles, including the shifting of the Earth’s tectonic plates, obliquity of its axis, precession of its equinoxes, and changing eccentricity of its orbit, and also the frequency of sunspots, intensity and remission of solar wind, cosmic rays from other stars influencing cloud formation, and movement of our solar system through the Milky Way, thus overturning the linear statistical correlation used by the IPCC, of bubbles in ice cores to temperature, referenced repeatedly by former-Vice President Al Gore, including in his widely distributed movie, *An Inconvenient Truth*, AND;

WHEREAS, were Al Gore’s 21 March 2007 recommendations to the Senate Committee on Environment and Public Works and House Committee on Energy and Commerce adopted as economic policy by Federal and State governments of the USA, the effects would literally tax out of existence the agro-industrial sector required for the creation and management of crucial resources, such as food, fresh water, electricity, medical isotopes, aluminum, cement, steel, ceramics, and plastics, all of which are required to sustain the growing populations of California, the USA, and the world, thus resulting in a human catastrophe tantamount to genocide against the lower 90% of income brackets of the world; however, the policy would temporarily increase the financial profits of domestic and international financiers who speculate in carbon futures, such as Al Gore.

THEREFORE, BE IT RESOLVED, that the California Democratic Party recognizes Al Gore as a leading United States spokesman for an economic policy premised on dubious science, which undermines the Constitutional obligations of representative government, and accelerates, at his personal profit, the deepening economic disparities between the rich and poor, AND;

THEREFORE, BE IT FURTHER RESOLVED, that the California Democratic Party rejects the policy recommendations of Al Gore as disastrous to human existence, rejects the IPCC’s argument that human industrially derived CO₂ emissions are a main driver of climate change as scientifically fraudulent, and reaffirms its commitment to the “New Deal” principles of Franklin D. Roosevelt, specifically the issuance of protected national credit to stimulate research and development within the agro-industrial sector, such as nuclear fusion, maglev transit systems, water desalination, and universal medical coverage, all as part of a solution to domestic and international economic injustices.
